## DESIGN ENVIRONMENT

Genetic Algorithms & Self-Organizing Maps in Computer-Aided Design

**Patrick Hebron**

December 2010

**Step 1:**

**User generates multiple iterations of a design.**

**(In this example, a teapot)**

TOOLS

- ABSTRACT MODELING
- 2D MODELING
- ▶ 3D MODELING
  - + Sphere
  - + Cube
  - + Cylinder
  - + Cone
  - + Plane
  - + Torus
  - + Prism
  - + Pyramid
  - + Pipe
  - + Helix
- Union
- Intersection
- Difference
- Split Polygon
- Subdivide Polygons
- Smooth Polygons
- Crease Polygon

3D PHYSICS

FORMS

- ▶ "Handle"
- "Kettle"

"HANDLE" ITERATIONS

ITERATIONS

STORE ITERATION

**Step 2:**

**The Arrow environment generates a self-organizing map, which is a two-dimensional representation of how each iteration relates to the others in terms of their features.**

Growth Arrows

Wither Arrows

Walls

Gates & Funnels

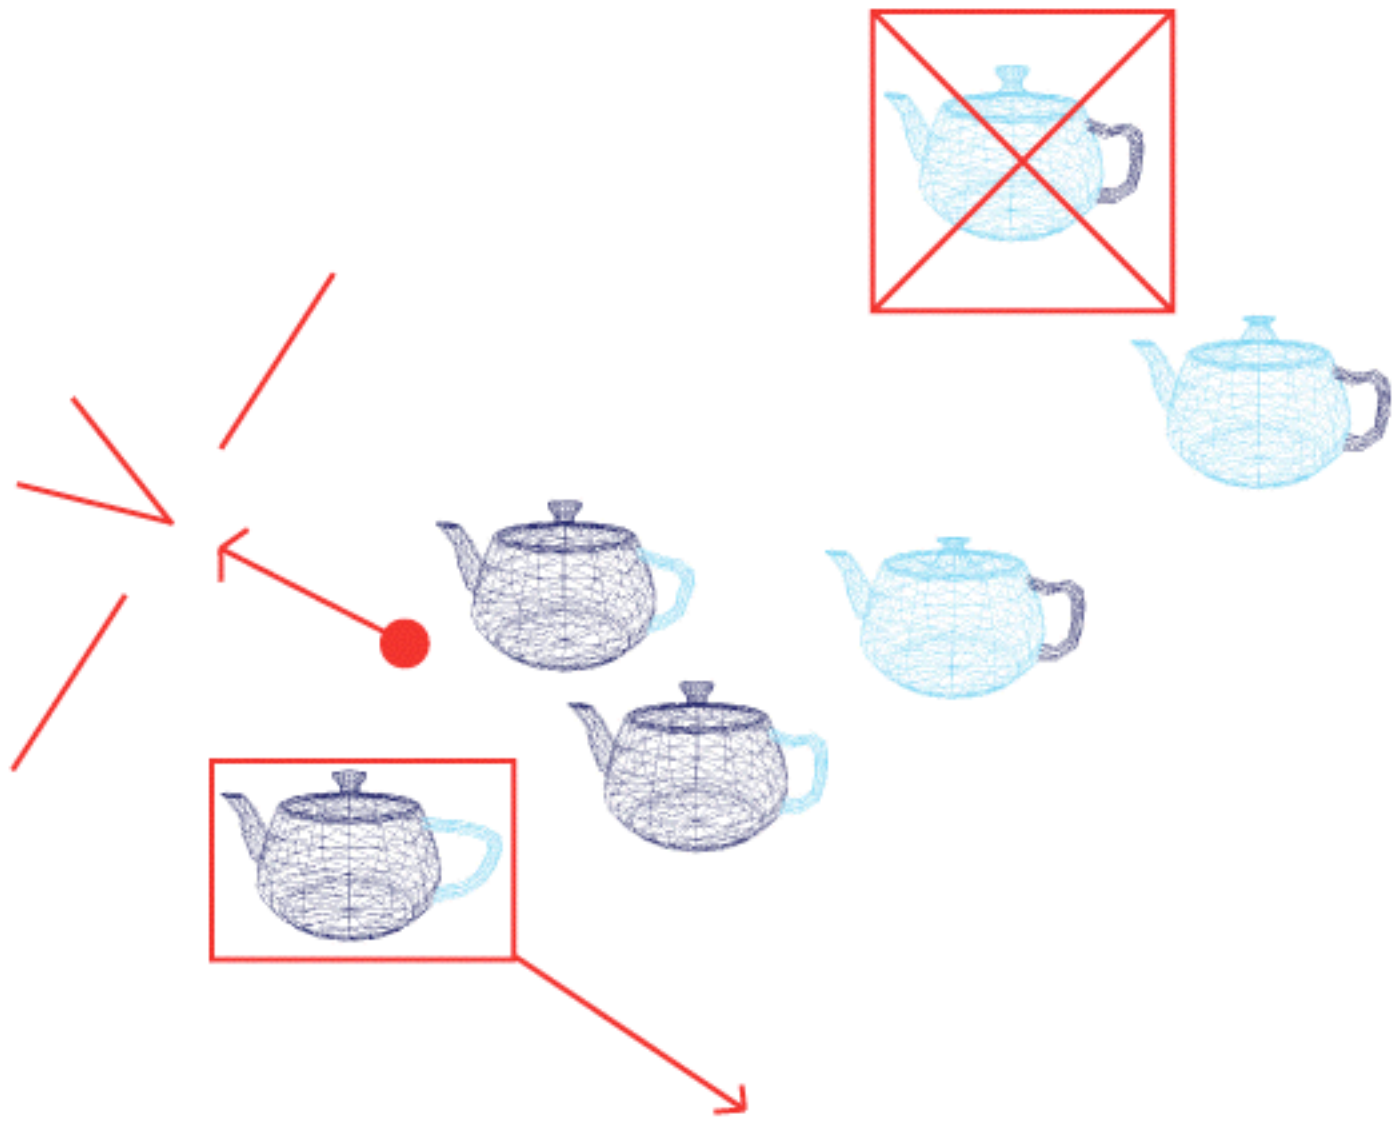

ITERATIONS

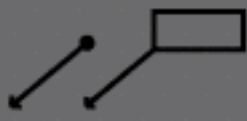

### Step 3:

The user draws “Arrow marks” on top of the self-organizing map. These marks indicate to the system’s internal genetic algorithm which areas of the map’s feature space are desirable directions for the automated generation of new design iterations.

ARROW MARKS

Growth Arrows

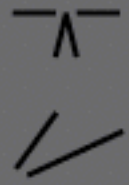

Wither Arrows

Walls

Gates & Funnels

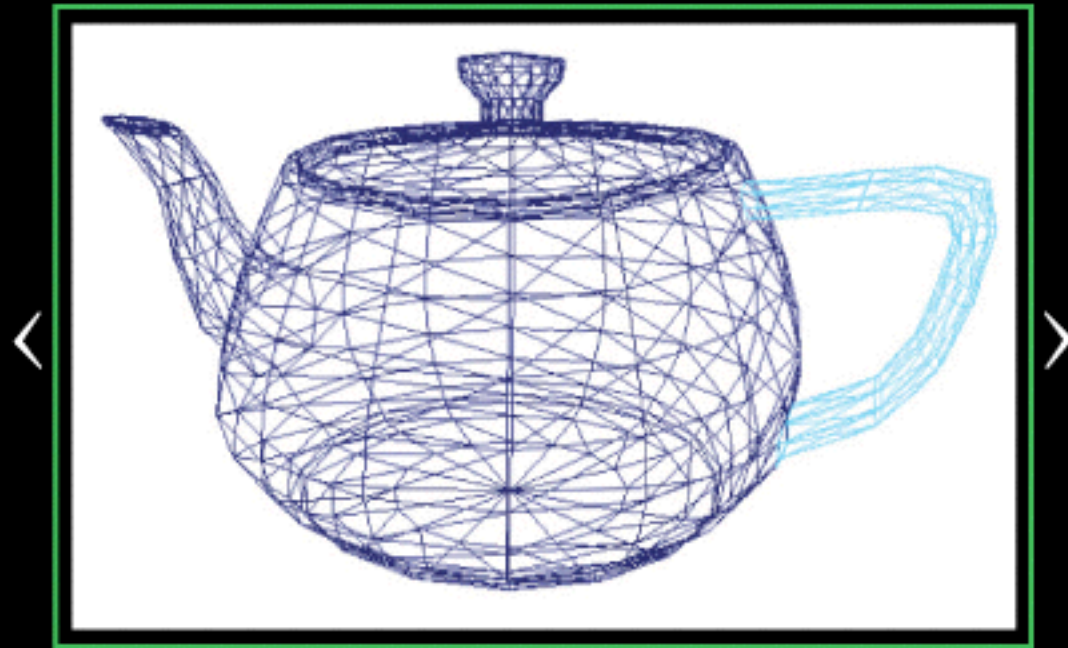

**Step 4:**

**User determines which of the computer-generated iterations should be kept.**

10 new iterations were created!  
Please review them:

Keep | Delete

**Repeat until a desirable design solution is found.**

# Appendix

A Simple Self-Organizing Map of 2D Points  
 (Stages of the map's formation, clockwise from top left)
